How will the government prepare for the inevitable industry wide job losses that AI will lead to in the future. The exponential growth of this technology coupled with the increased investment from large tech companies will fuel this process and cause it to be a reality far faster than most people expect. There are very few people in our government who are literate in a technological sense and even fewer who understand the pace of development in the AI field. The government needs to plan for a greater than 20% unemployment in the next 5 years due to these technologies, that will only increase on an exponential scale, this is an inevitability, there is no scenario in which the halting or slowing down of this technology will happen. We have opened Pandora's box and I am afraid that we do not have the safeguards in place as a society for what is to come.
