Comment

I believe there should be a light touch to regulation on Artificial intelligence software and companies in the United States, due to the National Security implications of imposing a strict regulatory system which would significantly harm American innovation, and the AI sector is the last significant technological sector along with Quantum Computing that has not been taken over by Chinese state owned companies with deep ties to the People's Liberation Army, MSS(Ministry for State Security) and the Standing Committee of the Chinese Communist Party, if we allow state owned Chinese companies to surpass us in the Artificial intelligence sector, it would be a disaster for this country and her people, we should look at the model that India is using when it comes to regulation, recently their government said they wouldn't regulate

AI(https://www.theregister.com/2023/04/06/india_no_ai_regulation/) the United States government needs to follow India and not the anti-innovation forces curr
