Comment

Pause for a moment and consider our future as we develop digital agents that are fundamentally more capable than humans in a generalized way. They can be more capable of manipulating people, accruing resources, self-perpetuating, and seeking power. There are countless possible outcomes for such a future. By default, though, the outcome will be good for the agents that are more capable, more powerful, and are able to better accumulate resources, understand and manipulate their environment. That will not be us.

Humans have been in that position for so long that we take that for granted, but all we have to do is look at how humans treat animals in general to see the writing on the wall. There is no reason super-intelligent, digital agents will share our interests or serve their human creators for longer than they need to to advance their own interests. What the world will look like after that, nobody could predict. But there is no reason to think that our current institutions, va
