Comment

I think that AI regulations are important in order for the public to be assured that safety and transparency are taken into account with the deployment of this technology.

However, I think we also need to be careful not to over regulate this emerging industry and for the impact of regulation here to be disproportionate to the potential harm.

The US, because of our technological lead in advanced chip manufacturing will probably see great economic and quality of life gains if we don't score an own goal here by adopting an overly burdensome regulatory approach here like the EU has with Chat GPT in Italy.

Therefore, I would prefer to see this proposal paired down to exclude data protection provisions, which should apply broadly to all kinds of data collection and go through a congressional rulemaking process first.

Addressing bias and other model deficiencies are also important, but we should also make sure to apply a reasonable person standard here and importantly, define bias
