Comment

How to demonstrate that AI systems are

1) legal

comment: All training data (raw data as defined) must come from public domain sources. If a person or individual places its info on public forums, then they should precisely know what laws apply to protect such display of data, if any.

2) effective

comment: AI systems must keep a log of the requests being made until the requestor: cancels the request, accepts the suggestion (effective) or rejects the suggestion provided (even a partial acceptance is a rejection). The log will help follow the effectiveness of the AI system suggestion.

3) ethical,

comment: Build modifications to the three laws for robotics (Asimov) into the code of all AI systems. Failure to comply with those modified laws will result in an unethical system rejected by the users of that AI system, and rejected also by the software/hardware used by the user with intention to access the AI system.

4) safe

comment: Like any tool (AI suggested information results inc
