To protect the integrity of digital artists, all AI art datasets should be completely cleansed of existing artwork that is not designated to be within the public domain, and any of said art should not be used in any future datasets. Digital artists are currently having their work fed into a generator and copied. This is not simply the AI learning from it, there are blatant examples of art being completely copied outright, producing work that is almost 1:1 with the original. This violates the copyright of digital artists everywhere and dilutes their work.
