Comment

It is inevitable that nations like China, known for their bad actor tendencies, will continue to develop AI systems such as Large Language Models (LLMs). Therefore, I believe it is the duty of legislators to ensure that American AI remains the best in the world. It is not implausible that China could develop an LLM with inherent negative biases in its responses, which may be designed to harm the user in a way that is not readily apparent. For instance, if a user is trying to create a program and uses the model to assist them, the model could suggest code that causes their computer to crash. In a more perilous scenario, someone seeking mental help could turn to this LLM for advice, only to receive harmful counsel from the bad actor's LLM.

The bad actors could market their LLM as a competitor to ChatGPT by offering it as a free or faster alternative, or as an uncensored version. I believe it should be the goal of legislators to maintain American AI dominance so that in the event
