We wanted to focus our response as computer science students on why AI accountability is important in society, specifically on a business level and a personal level. To keep accountability in the corporate world, we believe that internal as well as external audits and assessments should be used. We believe that both of these audits are necessary to make sure the focus is geared toward changing internal processes as opposed to gaining trust from stakeholders. For example, external auditors can keep internal audits and assessments accountable for anything they have missed or misinterpreted to make sure artificial intelligence is being ethically used. These audits should be made public to create transparency in the process. Additionally, on a personal level, we don't believe that AI should be making all of the final decisions. We believe AI should be used as a second opinion and that the professionals should use it to help them make the final call since artificial intelligence isn
