Comment

AI poses a existential threat to humanity, and we do not know how to control it yet. Alignment is unsolved, and we won't know when AI becomes smarter than humans until it is too late.

#1) Stop all training of LLM's that are more advanced than GPT3.

#2) Limit all government and private GPU farms to strict GPU farm sizes. This includes military and "black" projects.

#3) Strict export controls on all GPUs to allow foreign firms to create farms.

#4) BAN experiments that may accidentally lead to Artificial General Intelligence. AGI experiements should be ethically wrong in the same way that "human" medical experiments are.

#4) Extreme political pressure (and possibily military pressure) on countries that do not follow above.
