Comment

Current AI systems, such as ChatGP and MidJourney, are facing great backlash from creative communities and industries for the unethical and nonconsensual collection of data from across the entire internet for the purposes of training AI systems. This data includes, but is not limited to:

1. Photographs, both professional and personal
2. Artwork, both traditional and digital
3. Audio, such as music and voice recordings
4. Writing, including as journalistic articles, original works of fiction

AI companies like OpenAI have profited from their AI systems which were trained using data gathered without consent. While options for users to opt-out their data from these databases, users have to place their faith in the company to honor these requests, and there isn't anything to stop them from gathering new data in the future. Machine learning should be opt-in only to ensure that all data is gathered with explicit consent of members of the public.

Not only does the nonconsensual scra
