Comment

There is no ethical way to use the major AI image generators. All of them are trained on stolen images, and all of them are built for the purpose of deskilling, dis-empowering, and replacing real, human artists and designers. They have increased art theft and are also problematic in terms of copyright.

More broadly, AI also poses a significant risk in increasing the spread of misinformation and eroding public trust. It will increase the volume and speed of harmful content on the internet and, even when not used for illicit purposes, has the potential to overwhelm institutions and individuals with junk content. This has already been seen in *Clarkesworld*, a science fiction magazine, having to ban new story submissions after receiving thousands of low-quality, AI-generated pieces. This causes stress to humans who have to sift through thousands of junk content and can cut out people making legitimate work.

AI applications in industry and warfare have a even greater risk to global
